

MARK V[®] SERVICE-LESS[™] FRAC VALVES

Bestway's NEW Mark V[®] series frac valves feature dual purpose ValveShield System[™] technology enabling greaseless frac operations, while eliminating sand and particle intrusion. The ValveShield System[™] innovative design decreases repairs, eliminates NPT, and extends the service life of your valve.

GET YOUR WHEELS TURNING FASTER

Resiliency in the oilfield requires innovative ideas to lower cost and improve profitability.

Grease

- ValveShield System™ eliminates the need to grease during frac
- Smaller Body Cavity design reduces operating grease in the valve
- Eliminate the need for expensive greasing units, manifolds, and hoses on location
- Eliminate service techs on location required to grease traditional valves

Repairs

- Reduce the overall cost of repairs by decreasing their frequency
- ValveShield System™ protect the valve's internal components reducing wear and tear
- Potential for pad to pad usage

Logistics

- 30% lighter valves mean more valves per truck
- Eliminate the trucking for supporting greasing equipment
- Less travel reduces the carbon footprint

STEP UP YOUR GAME

Sell, sub-rent, or finance - Bestway is here to help you WIN!

Stages

- Run longer and keep fracking continuously

Utilization

- Increased utilization by keeping valves out of the shop and on location making money

ROI

- Reach your payoff faster and improve profitability

Safety

- Keep employees out of the red zone
- Less connections means less problems
